

TRADITIONAL CORK FLOORING

UNFINISHED TILE DESCRIPTION

24/7 TECHNICAL SUPPORT 800.345.6202

Expanko Traditional Cork tiles are available unfinished/pre-sanded for those who prefer to apply the floor finish on-site after installation. For areas such as restaurants, kitchens, bathrooms and any other area subjected to surface moisture, this is the recommended system. The benefit of applying finish on-site is that all tile seams will be sealed. In addition to further protecting the floor, site applied finish tends to hide floor seams and creates a more monolithic appearance on the floor surface.

For on-site application, Expanko recommends two options. The first option is to apply one coat of *Expanko LS Sealcoat*, water-based sealer, to the cork and 2-3 coats of *Expanko LS Water-based Matte Polyurethane*. The second option is a wax coating. Three coats of paste wax are recommended.

Both the *LS Polyurethane* and wax coatings, when applied on site, will provide a finish equal to those coatings applied at the factory, if the recommended products are used and procedures are followed. **Cork cannot be left unfinished.**

Traditional Cork Care and Maintenance Instructions (Document ID: 111) are available and should be followed.
